

Shape FleXmount™ Brackets to fit any motor

The FleXform™ Tool allows the installer to quickly shape a FleXmount™ Bracket to fit Aaki's motor shaft grounding module to almost any motor endbell.

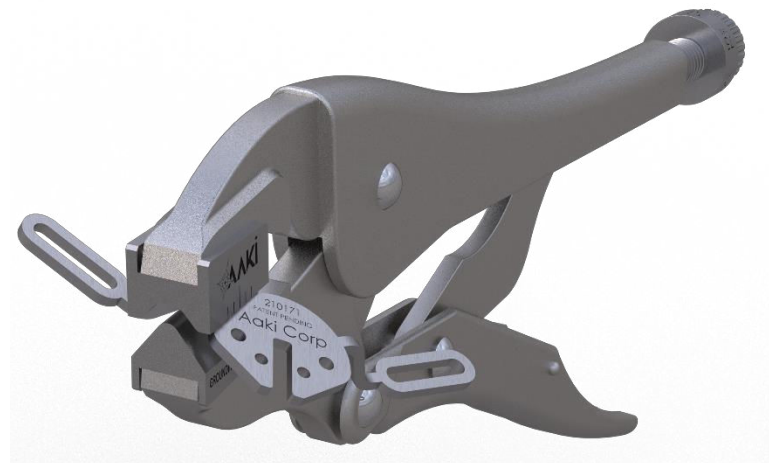

This tool makes forming a FleXmount™ bracket quick and easy in just a few steps:

- Turn the dial to achieve the desired bend angle
- Place the FleXmount™ bracket in the tool at the bend point
- Squeeze the handle

In just a few seconds, you will have a precise, consistent, bend the first time, every time.

Repeat the process, and in a few minutes, you will have formed a FleXmount™ bracket that is a perfect fit for your motor endbell.

The FleXform™ Tool comes complete with dies and bend dial installed and calibrated, and ships with several FleXmount™ brackets to practice with and perfect your technique.
